

Mobile Download Manager

Customer

Leading Mobile Application Development Company from the UK

Challenge

The customer had a tie up with one of the leading mobile service provider from UK to offer value added download and SMS services which included MP3/MP4 songs, Images and RSS feeds from the web URL. The application allows mobile user to log into the server through his mobile device, download and store MP3/ MP4, images, games into the mobile memory (Phone Memory / Card Memory) and play as and when required.

Technology

J2ME

Solution

STPL's team successfully developed a cost-effective mobile application as per the needs of the client which could download select songs from the specified URL. In-case while downloading any song and the link broke half-way-through, the application could re-start downloading exactly from where the link broke, thus saving the bandwidth and time.

Benefits

- ✚ Customer is able to offer a variety of services to the cellular service provider including download services, contract SMS services among other.
- ✚ Robust and user friendly interface attracted more and more mobile customers to use this application, increasing revenues of the client.
